AUGUST IS NATIONAL IMMUNIZATION AWARENESS MONTH

An important goal for the Niagara County Department of Health is to increase awareness about immunizations across the life span, from infants to the elderly. Getting immunized is a lifelong effort regardless of age, sex, race, ethnic background or country of origin.

As parents prepare their children for school, students enter college, and healthcare workers prepare for the upcoming flu season, the month of August presents an excellent opportunity to remind everyone that they can help protect themselves, their families, friends and their communities from serious, life-threatening infections by staying up-to-date with their immunizations. Information regarding recommended immunizations may be obtained by calling the Immunization Program @ 278-1903.

Public Health: Prevent. Promote. Protect.
