

All are welcome.

We can help.

If you think you have symptoms of a sexually transmitted infection (STI), get tested and treated right away. Even if you do not have symptoms, you could have a STI.

NOTE: We cannot perform STI testing if you are pregnant.

Hours:

Monday and Thursday  
9:00 am to 3:00 pm

Express Visits on Wednesday  
(for people without symptoms)  
Call for hours of operation

No appointment necessary

Please bring photo I.D. and health insurance card with you to clinic.

## Did you know?

- All sexually transmitted infections (STIs) are treatable; most are curable.
- Your yearly physical or gynecological exam may not routinely include STI or HIV testing.
- One in two sexually active young people will get an STI by the age of 25. Most will not know it.
- 80% of women and 50% of men have no symptoms.
- Untreated STIs can cause lifelong problems, such as: chronic abdominal (lower belly) pain, the inability to have children, harmful effects on pregnancy and newborn babies, arthritis, and could affect the heart or brain.
- Having an STI can increase your chance of getting HIV if exposed to the virus.

**YES, IT IS EASY**

**NO, IT DOESN'T HURT**

**GET YOURSELF TALKING**

**GET YOURSELF TESTED**

**GYT**  
GET YOURSELF TESTED

## Who Should Get Tested?

- Anyone who has had any form of sexual activity with a person whose STI or HIV status you did not know.
- If you have ever shared any drug equipment and have never been tested before.
- Before starting a new sexual relationship, you and your partner should both be tested and treated, if necessary.

## How to Help Prevent Infection

- Do not have sex with a partner if you have symptoms, or are with someone with symptoms.
- Limit your number of sex partners. Having only one sexual partner, who is uninfected and who only has sex with you, is the safest way to prevent infection.
- Wash genitals after sexual relations.
- Use a water-based lubricated latex or polyurethane condom with each sex act.
- Do not share drug equipment.
- Make sure you are up to date on all vaccines, especially the HPV, Hepatitis A and Hepatitis B vaccines

## Non-judgmental Care

### Get tested and treated

We provide confidential testing, treatment and referrals, and we can answer your questions about HIV and other STIs.

### Get evaluated for PrEP

Pre-Exposure Prophylaxis (PrEP) is a pill that can prevent HIV infection. It is for HIV negative people who are at risk of becoming HIV positive through sexual activity or from injecting drugs.

### Get help finding HIV care

All people living with HIV in New York State can get HIV medical care. We can connect you to the right services.

### Get Rapid HIV and Hepatitis C testing here

We offer highly accurate rapid HIV and Hepatitis C tests that will give you your results in just 20 minutes.

### Get an immunization consult

We recommend vaccines such as Hepatitis A, Hepatitis B, Human Papilloma Virus (HPV), Influenza (Flu), Tdap and more.

**We offer clinical services for anyone ages 12 years & older. Parental consent is not needed**
